This document describes the initial BriskTag for OneStream release for solution review, deployment reference, and release tracking.

Table of Contents

Section	Title	Page
1	Release Overview	2
2	Upgrade and Compatibility	2
3	Release Highlights	2
4	Deployment and Prerequisites	3
5	Documentation and Support	3
6	Known Considerations and Scope	3

1. Release Overview

BriskTag for OneStream provides a branded access hub and embedded entry point to BriskTag from within OneStream. Users select Open BriskTag once and then use BriskTag navigation for reporting, document vault, and filing workflows.

Item	Details
Solution name	BriskTag for OneStream
Solution code	BRTAG
Solution version	SV100
Platform version	PV8.5.4
Exact build tested	8.5.4.18007
Release type	Initial Release

2. Upgrade and Compatibility

- This is the initial release; no upgrade from an earlier BRTAG version is required.
- Requires OneStream Platform Version 8.5.4 or later.
- Use the standard OneStream import process and the supplied package contents.
- Customer-specific modifications should be reviewed before applying future solution updates.

3. Release Highlights

- BriskTag Access Hub available through OnePlace.
- Single Open BriskTag button to reduce repeated embedded-session authentication.
- BriskTag opens inside the OneStream solution frame.
- Home, Help, and Settings navigation.
- License-key entry and validation interface; no key is included in the package.
- Embedded Instructions and parameter-driven Help/About version and publisher details.
- Administrator-controlled uninstall support.
- BriskFlow/BriskTag branded theme and header banner.

4. Deployment and Prerequisites

Deployment

- Import BRTAG_PV8.5.4_SV100_PackageContents.zip using the standard OneStream solution import process.
- Refresh or reopen OnePlace after import.
- Open OnePlace > Dashboards > BriskTag Access Hub.
- Enter the customer license key when the licensing page is displayed, then select Validate.
- Select Open BriskTag from the access hub.

Prerequisites

- OneStream Platform Version 8.5.4 or later.
- Permissions to import and configure solution content.
- A valid OneStream-issued customer license key.
- Network access to the confirmed BriskTag production endpoint: <https://app.briskflow.ai/>.
- Valid BriskTag user credentials.

5. Documentation and Support

Installation, first access, navigation, Help, Settings, uninstall, and troubleshooting guidance is provided in BRTAG_PV8.5.4_SV100_Instructions.pdf and through the embedded Help page.

For solution support, contact BriskFlow AI / BriskTag Support at tech@briskflow.ai and provide the OneStream platform build, solution version, environment, and a description of the issue.

6. Known Considerations and Scope

- The package does not contain a customer license key. License provisioning must be completed separately for the target customer and environment.
- BriskTag uses one shared, centrally hosted, row-based multi-tenant production endpoint for all customers: <https://app.briskflow.ai/>. Tenant and data isolation are enforced within BriskTag through authenticated tenant-scoped controls; therefore, customer-specific endpoint configuration is not required. The confirmed production endpoint is included in the final SV100 package and was tested successfully inside OneStream.
- BriskTag authentication is handled by the BriskTag web application.
- Availability depends on network connectivity to <https://app.briskflow.ai/> and valid BriskTag user access.
- Automated OneStream report export, file staging, SFTP delivery, and automated BriskTag Vault ingestion are not included in Phase 1.
- SV100 does not create custom OneStream solution tables.

Release Status

Initial release. No prior-version fixes or upgrade scripts apply.
